

Power by **Contact**[®] - patented technology by energysquare

Energysquare is one of the leaders in the wireless charging industry. The French company has developed Power by Contact[®] technology, a revolutionary conductive-based charging technology, embedding advanced detection algorithms and charge monitoring systems that always provide laptop users with optimum power, at the right place and the right moment for enhanced ergonomics.

At Energysquare, our primary goal is to free employees from cables in their workspaces and home offices. Our Power by Contact[®] technology will bring to your organization and employees added value in the new working environment context: enhanced comfort, optimal power transfer efficiency, easy clean desk facility, and consequently a better productivity.

Lenovo has announced at CES 2021 the commercialization of two brand new laptop models embedding Power by Contact[®] technology for 2021.

New ground-breaking products embedding Power by Contact[®] technology will also be announced this year, to keep freeing laptop users from cables.

Power by Contact[®] makes it possible to charge laptops over an ultrathin mat, with a total freedom of placement, and optimal speed and energy efficiency.

The technology is also compatible with USB type C charging standards.

At last, but not the least, with Power by Contact[®] technology in this pandemic situation, cleaning your desk has never been so easy and fast.

This is the beginning of a new era, where workspaces and desks will be 100% cableless.
