Better Voice, Better Life

APrevent intelligible speak (AiSpeak) : speech conversion platform for speech disorder (dysarthria) patients

AiSpeak is an innovative solution providing patients with speech disorders to communicate with others using their own speeches. Speech is an important communication tool through which people express thoughts and emotions. Speech disorders (or dysarthria) can occur at birth, as in cerebral palsy (CP) or later during life, as in neurological disorders, including stroke, Parkinson's Disease, Amyotrophic Lateral Sclerosis (ALS), Multiple Sclerosis (MS), or Huntington's disease. AiSpeak opens a door to a complete new dimension of user experience for dysarthria patients to regain normal communication capability and life quality.
