Strong Authentication

the identity of the user is certified by his electronic identity document by scanning it with NFC

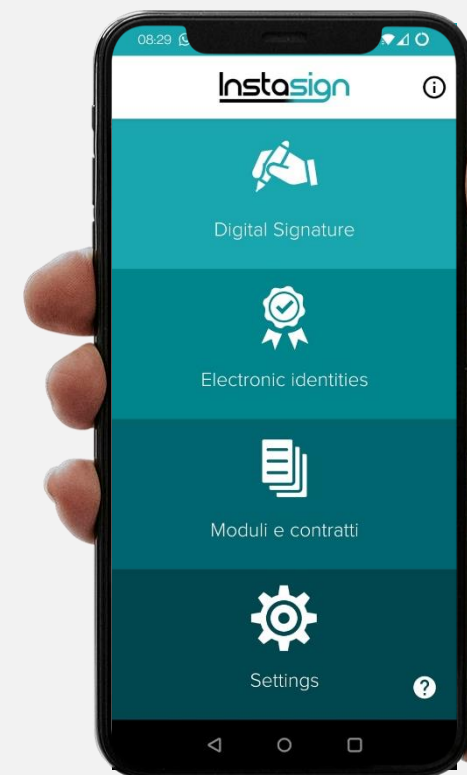

by face recognition the app verifies the identity of the user in real time empowered by an anti-spoofing liveness detection system

the contract is signed by advanced electronic signature compliant with UE regulation eIDAS

the contract is stored as a signed pdf, immediately available to all subscribers

electronic identity  
document

Face recognition  
of the cardholder

Know your customer  
On-boarding  
Check-in

- identikyc allows companies to verify in a certain, secure and privacy-friendly way the identity of citizens through an electronic identity document such as an identity card or passport
- identikyc uses:
  - the NFC sensor of the phone to read the data in the chip of the electronic document;
  - facial recognition to identify the citizen
  - an anti-spoofing liveness detection mechanism to detect attacks to the system
- identikyc is suitable for any Know You Customer, on-boarding and check-in procedure from mobile devices and in any case where a certain identification of the citizen is required.
