(h[s]) HYPERSCIENCE ®

THE HYPERSCIENCE PLATFORM

The Hyperscience Platform combines our best-in-class intelligent document processing with better accuracy, greater connectivity and increased configurability - on an intuitive, user-friendly platform you know and trust.

Leverage state-of-the-art Machine Learning based extraction to automate complex document processes **from input to actionable data.** With data validation and enrichment capabilities, you can be confident the information you're acting on is correct, ultimately reducing the number of steps in your downstream workflows.

Better Accuracy

Accurate, complete data is the critical step zero when automating any business process. Save time and errors by verifying extracted, machine-readable data against industry database software without leaving the Hyperscience Platform:

CONFIRM ✔
with external systems (e.g. whether a received claim is from an active customer).

MODIFY ✳
extracted data so it's compatible with downstream systems.

ENRICH ↗
the output of diverse documents by adding valuable data from external systems.

Greater Connectivity

The Hyperscience Platform easily integrates with your existing internal or external systems and applications to streamline the complexity of your document processing workflows and drive a greater ROI.

> Easily create a Flow that automatically sends requests to a BPM tool, for example, to start a new case after data has been extracted using Hyperscience, increasing straight-through processing.

Increased Configurability

With Hyperscience, you can manage dynamic processes across multiple lines of business on one platform.

Our intuitive UI is built for business users to easily set up Layouts, models, and Supervision tasks in under 30 minutes, without added complexity or dedicated developer resources. Build customizable Flows to route required documents or data outputs to specific teams or downstream processes.

OUR PROMISE

The Most Accurate Data Extraction

Set your desired target accuracy rates and our machine automates against that using our proprietary ML. This high-accuracy extraction is bolstered through API and database connections (i.e. integrations with other systems within your environment to leverage external data), which drives higher automation, lower error rates, and greater efficiencies.

Best-in-Class Hypercare

Our Customer Experience team has guided Global 2000 companies and government agencies through their digital transformation projects. Modernize operations and unlock business potential with the support of our subject matter experts, proven methodology, and global partner ecosystem - from planning and implementation to steady-state support and expansion.

Shorter Time-to-Value

Your business processes are unique - automate like it. Modularization and ease-of-integration are critical to unlocking the cost savings and efficiency gains you need to outperform your competition and provide a superior customer experience to your customers when they need it most.

Continuous Improvements

Hyperscience is exceptionally good at knowing when to bring in humans, driving lower error rates and higher automation over time. In the background, our ML mechanism improves throughput without sacrificing accuracy.

Built for Business Users

Enterprise-grade and easy-to-use aren't mutually exclusive. Designed for business users, Hyperscience is an intuitive platform, allowing for widespread adoption. Enjoy lower total cost of ownership and successfully scale to more use cases and LOBs without added complexity.

Unlock Data to Achieve Greater Customer Experience and Drive New Insights:

5X Improved Speed

67% Lower Error Rates

90% Cost Reduction
