ABOUT US

Kardome's
proprietary AI-driven
speaker separation
makes individual
voices
understandable —
for both speech
recognition engines
and human listeners.

Voice user interfaces simply **don't work well** in natural environments where there are ***multiple speakers / background noises***.

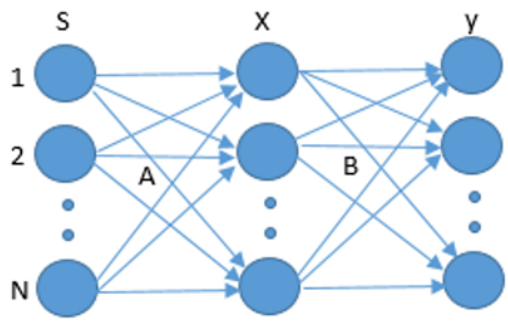

Kardome's software uses existing microphones in a device to isolate individual speech in a noisy / multiple-speaker environment through location-based clustering.

THE PROBLEM

THE SOLUTION

How Kardome Works

We replace traditional beamformers with AI source separation algorithms, allowing us to produce over **90%** better voice activation results
