

## **gita quick facts**

Piaggio Fast Forward (PFF) is a Boston-based company that creates best-in-class human following technology which leverages the utility and benefits of robots in the real world.

### **PFF is headquartered in Boston**

This includes the corporate office and manufacturing facility.

### **PFF is backed by the Piaggio Group**

The Italian manufacturer of the iconic Vespa scooter.

### **What gita is**

gita (pronounced JEE'-tah and Italian for short trip) is the first robot programmed with pedestrian etiquette. It pairs with and follows a person at up to 6 miles per hour and for up to 4 hours of continuous movement and carries up to 40 pounds of cargo.

### **How gita works**

The gita robot efficiently navigates indoor and outdoor pedestrian-dense environments using computer sensor vision in real time with human-like pedestrian etiquette. A simple touch of a button allows gita's sophisticated technology to pair with its leader using a three-dimensional understanding of people, obstacles, speeds, and trajectories so that it can follow safely with the speed and nimbleness of a human.

### **Benefits of gita**

Upon delivery gita is ready to go and to collaborate with employees, guests and residents without any special training or experience. There is no set-up and no need for mapping.

Amenitize your properties and services with the opportunity for your employees and customers to safely interact with robots. Where some robots deliver the experience of a warehouse or fulfillment center, gita robots astonish with their high quality human following and bring positive attention to your brand and your customer's experience.

### **The mygita app provides enhanced features**

Lock and unlock gita and its cargo bin; receive notifications from gita about its status; check gita's battery charge level; stream and play audio through gita's speaker using Bluetooth® wireless technology; install new features over-the-air as they are released. Available on iOS and Android devices.

### **Charge gita and phone charging port**

gita uses a standard three prong wall outlet to completely charge the battery in under 2 hours. A phone charging port inside the cargo bin lets you charge mobile devices on the go.

### **Custom IGLOO cooler for the cargo bin**

The soft cooler is available as an accessory.

### **gita specifications**

Speed: 6mph

Weight: 50lb

Cargo capacity: 40lb (or 2,630 cubic inches)

Dimensions: 27 x 22.3 x 24 inches

Following distance: 3-5ft

Incline ability: 16%

Cargo bins: both lidded and non-lidded bins available

Colors: Signal Red, Thunder Gray, Twilight Blue as standard colors, custom colors and customer logo applications available.
